Problem Statement
Java

Create an array such that it keeps the record of grocery items per month.

For example :

In January month you purchased 5 items of 100 200 150 290 540 rupees. While in February you only purchased 3 items of 540 100 and 230.

Your task is to maintain 12-month grocery expenditure in an array and find the month in which your expenditure is most and print the number of that month in output.
